# What is the problem?

### Tragedy of the commons

- We usually think of our browser as the product
- Web developers want a cohesive platform
- Let's think of the platform as the product
- Neglected, so improving is easy
- Apply basic software engineering

### WPT one year ago:

- No one's primary test suite
- Harder to use than non-shared tests
- No continuous integration
- No dashboard/waterfall
- Out of sync with specs

# Progress so far

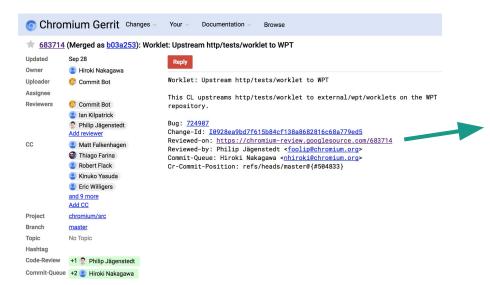

#### 2-way sync

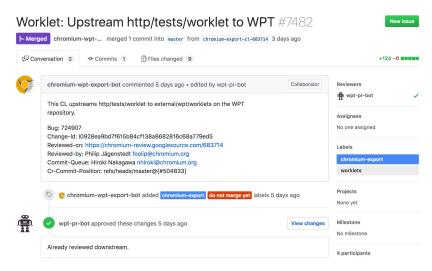

WPT changes imported into Chromium within 12 hours

Chromium changes exported to WPT within 1 hour

Humans not in the loop, but on rotation if needed

### 2-way sync (export)

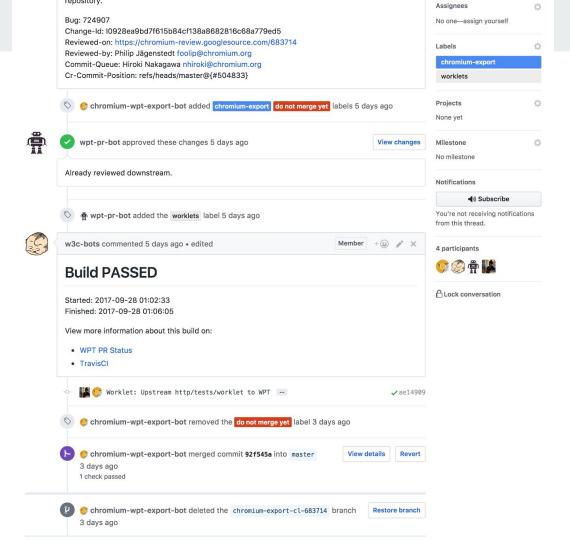

### **Per-PR testing**

Catches unstable tests

Does not require tests to pass

#### web-platform-tests dashboard

Please leave your sense of logic at the door, thanks!

#### Improving interoperability

January 30th, 2017 by Philip Jägenstedt in WHATWG

The goal of the WHATWG's Living Standards is to achieve interoperable implementations. With an ever-evolving web platform, we want changes to our standards to reach all implementations quickly and reliably, but from time to time there have been mishaps:

- Two table-related interfaces were ignored by implementers for a decade, but when finally removed from the standard it turned out that WebKit had just added them. Sorry!
- In 2007, the serialization algorithm for was changed to add an extra newline, so that it
  would roundtrip correctly. It was implemented in Presto (Opera) in 2012 (and the standard was
  tweaked), then implemented in Gecko in 2016, but they found it was not web compatible, so it
  was reverted. Oh well.
- We changed how non-empty URL attributes are reflected with support from two implementers, but nobody followed through with the change and it was later reverted. Ahem.

Three months ago, we changed the process for the HTML Standard to encourage writing tests and filing browser bugs for normative changes. (Normative means that implementations are affected.) This was the first step on a path towards improving interoperability and shortening the feedback cycle, and it has thus far exceeded our own expectations:

# More testing in standards

Visualizing the day-to-day work in specs and tests

foolip.github.io/day-to-day/

#### specs · tests · day-to-day

This collection of green boxes represents activity in specs and their corresponding test suites over the past 8 weeks. Green in both rows is good. A test a day keeps the bugs away.

#### Make WPT the default in Chromium

Triage new test failures

Upstream as much of LayoutTests as possible

~70k files, compared to ~60k in WPT now

Challenge: duplication and pre-fork WebKit tests

\_\_\_

# Can we relax?

No! (trick question)

### You can help!

- Write and use wpt for your work
- Tell us about what's not working
- Make 2-way sync work for everyone
  - Automatic 2-way sync in Gecko is coming!
  - o Edge?
  - o WebKit?

# We can do it! \o/
